INDEX

Page

Absorption, arsenical injury of fruit-tree roots by..... 311–313
Acid, arsenic, injury to fruit trees..... 298–299
Acidity, development in fermenting corn silage..... 368–374, 376–377
Albumin, estimation..... 451–455
Alcohol, formation in fermenting corn silage..... 368–373, 376–377
Alternaria sp., temperature relations..... 139–164
Althea. See *Hibiscus syriacus.*
Amino nitrogen, change in fermenting corn silage..... 368–369, 372, 375
Ammonia nitrogen, change in fermenting corn silage..... 372
Ammonium arsenate, injury to fruit trees... 298–299
Anthrax—
  serum. See Serum, anthrax.
  treatment in man..... 52–53
Antigen, tuberculosis—
  comparative tests..... 14–16
  preparation..... 5–10
  standardization..... 8–10
Apiary, spore-forming bacteria—
  comparison of species..... 399–412
  description of species..... 399–412
  inoculation..... 412–420
Apple-rot fungi, temperature relations..... 139–164
Apple. See *Malus sylvestris.*
Arachis hypogaea, wilt of—
  casual organism..... 441–448
  description..... 442–443
  dissemination of..... 444–445
  effect of rotation..... 445
  history..... 441–442
  injury by..... 443
  varietal resistance to wilt..... 445–447
Arsenic—
  acid, injury to fruit trees..... 298–299
  injury to fruit trees..... 283–318
  trioxid, injury to fruit trees.. 299–301, 308, 309, 313
  trisulphid, injury to fruit trees..... 299–301
  washing, effect on fruit-tree injury..... 302–303
Arsenical Injury Through the Bark of Fruit Trees (paper)..... 283–318
Aspergillus niger, temperature relations..... 152
Availability of Potash in Certain Orthoclase-Bearing Soils as Affected by Lime or Gypsum (paper)..... 21–28

Bacillus—
  alvei..... 412–414
  atrosepticus—
    biochemical characters..... 112–119, 123–124
    cultural characters..... 105–112, 123
    description..... 97–98, 122–124
    group number..... 120
    inoculation..... 98–124

Page

Bacillus—Continued.
  atrosepticus—continued.
    morphology..... 103–105, 122–123
    nomenclature..... 121–122
    pathogenicity..... 119–120, 124
    physical characters..... 112–119, 123–124
    relation of temperature to growth..... 116–119
  larvae..... 412, 416
  melanogenes—
    biochemical characters..... 112–119
    cultural characters..... 105–112
    description..... 98
    group number..... 120
    inoculation..... 98–124
    morphology..... 102–105
    nomenclature..... 121–122
    pathogenicity..... 119–120
    physical characters..... 112–119
    relation of temperature to growth..... 116–119
  mesentericus—
    description..... 405–407
    inoculation..... 412–418
  orpheus, description..... 410–411
  pluton..... 412, 417
  phytophthorus—
    biochemical characters..... 112–119
    cultural characters..... 105–112
    description..... 95–96
    group numbers..... 120
    inoculation..... 98–124
    morphology..... 102–105
    nomenclature..... 121–122
    pathogenicity..... 120
    physical characters..... 112–119
    relation of temperature to growth..... 116–119
  solanisaprus—
    biochemical characters..... 112–119
    cultural characters..... 105–112
    description..... 96–97
    group number..... 120
    inoculation..... 98–124
    morphology..... 102–105
    nomenclature..... 121–122
    pathogenicity..... 119–120
    physical characters..... 112–119
    relation of temperature to growth..... 116–119
  vulgatus—
    description..... 407–410
    inoculation..... 412–418
Bacterium—
  malvacearum—
    causal organism of angular leafspot of cotton..... 461–475
    dissemination..... 464–472
    infection of seed of *Gossypium* spp..... 462–464
  tumefaciens—
    causal organism of crowngall..... 165–186
    growth..... 407–409

Calcium Compounds in Soils (paper) 57–77
Carbon dioxid, evolution in fermenting silage 373–374
Cephalothecium roseum, temperature relations in apple 139–164
Choanephora cucurbitarum—
causal organism of squash disease 319–328
chlamydospores 324
conidia 322–323
description 326

Page

Choanephora cucurbitarum—Continued.
development 322–326
dissemination 326–327
distribution 319–320
etiology 321
history 319–320
parasite of—
Cucumis sativus 320, 326
Cucurbita pepo 320, 326
Hibiscus—
coccineus 320, 326
esculentus 320, 326
syriacus 320, 326
pathological anatomy 326
sporangia 323–324
sporangiospores 324
zygosporic stage 324–325
Citrus aurantium—
effect of fertilizers on—
composition 127–138
quality 127–138
phosphoric-acid content 137
potash content 137
effect of soil on composition 135–136
Colley, R. H. (paper): Discovery of Internal Telia Produced by a Species of Cronartium 329–332
Complement fixation, diagnosis of tuberculosis by 1–20
Cooley, J. S., and Brooks, C. (paper): Temperature Relations of Apple-Rot Fungi. 139–164
Copper aceto-arsenite, injury to fruit trees .. 299–309
Corn. See *Zea mays*.
Cotton. See *Gossypium* spp.
Crabapple. See *Malus* spp.
Crimson clover. See *Trifolium incarnatum*.
Cromwell, R. O. (paper): Fusarium-Blight, or Wilt Disease, of the Soybean 421–440
Cronartium—
ribicola—
internal telia 330–331
parasite of *Ribes roezli* 330
spp., discovery of internal telia produced by 329–332
Crowngall—
causal organism 165–186
mechanism of tumor growth in 165–186
Cucumber. See *Cucumis sativus*.
Cucumis sativus, host plant of *Choanephora cucurbitarum* 320
Cucurbita—
pepo, host plant of *Choanephora cucurbitarum* 320
spp.—
appearance 321
causal organism 320
economic importance 320
Curly-leaf. Syn. Little-leaf.
Cutworm, parasite of 189–194

Diagnosis of Tuberculosis by Complement Fixation, with Special Reference to Bovine Tuberculosis (paper) 1–20
Dilatometer—
description 197–200
measurement of soil moisture by 195–217
principle 197
value 215

Diphtheria serum. See Serum, diphtheria. Page
Discovery of Internal Telia Produced by a Species of Cronartium (paper)..... 329–332
Dissemination of the Angular Leafspot of Cotton (paper)..... 457–475

Effect of Fertilizers on the Composition and Quality of Oranges (paper)..... 127–138
Effect of Irrigation Water and Manure on the Nitrates and Total Soluble Salts of the Soil (paper)..... 333–359

conglulinans, characters..... 431
discolor, characters..... 430–431
lycopersici, characters..... 430–431
niveum, characters..... 430–431
orthoceras, characters..... 431
radicicola, temperature relations..... 139–164
oxysporum, characters..... 430–431
redolens, characters..... 431
sp. on soybean—
characters..... 430–431
morphological comparison with *Fusarium tracheiphilum*..... 431–433
spp., effect of culture media on..... 428–429
tracheiphilum, characters..... 430–431
vasinfectum, characters..... 430–431
Fusarium-blight of *Soja max*—
history..... 422–424
manner of infection..... 425–427
occurrence..... 422–424
symptoms..... 424–425
Fusarium-Blight, or Wilt Disease, of the Soybean (paper)..... 421–440

Globulin— Page
chemical analyses..... 45–50
inoculation of animals..... 41–45
preparation..... 40–41
Glomerella cingulata, temperature relations. 139–164
Glycine soja. Syn. *Soja max*.
Gossypium—
herbaceum, host plant of *Choanephora cucurbitarum*..... 320
spp., infection of seed..... 462–464
Grape. See *Vitis* spp.
Gypsum, effect on potassium in orthoclase-bearing soils..... 21–28

Harris, F. S., and Butt, N. I. (paper): Effect of Irrigation Water and Manure on the Nitrates and Total Soluble Salts of the Soil..... 333–359
Hazen, W., Shorey, E. C., and Fry, W. H. (paper): Calcium Compounds in Soils.... 57–77
Helicosporium nymphaearum—
casual organism of leafspot-rot of pond lilies..... 219–232
cultural characters..... 225–226
description..... 229–230
germination of sclerotia..... 227
growth..... 227, 228
host-parasite relation..... 228–229
inoculation..... 221–225
isolation..... 220–221
parasite of—
Nelumbium speciosum..... 225
Nymphaea spp..... 225
taxonomy..... 229, 230
temperature relations..... 228
viability..... 227
Hibiscus—
coccineus, host plant of *Choanephora cucurbitarum*..... 320, 326
esculentus, host plant of *Choanephora cucurbitarum*..... 320, 326
syriacus, host plant of *Choanephora cucurbitarum*..... 320, 326
Hog goober. See *Worandzia subterranea*.
Hog serum. See Serum, hog.
Hyperimmunization, change in serum proteins during..... 50–52

Immunity Studies on Anthrax Serum (paper) 37–56
Insect, dissemination of *Bacterium malvacearum* by..... 464–466
Insecticides, effect on little-leaf of vine..... 394–395
Iron arsenate, injury to fruit trees..... 300, 302
Irrigation, effect on nitrates and soluble salts of soil..... 333–359

Kelser, R. A., Eichhorn, A., and Berg, W. N. (paper): Immunity Studies on Anthrax Serum..... 37–56

Lamb, A. R. (paper): The Relative Influence of Microorganisms and Plant Enzyms on the Fermentation of Corn Silage..... 361–380
Lamb, growth—
relation of fat content of ewes' milk to..... 29–36
relation of milk yield to..... 33–35
Lead arsenate, injury to fruit trees. 299, 303, 308–309
Leafspot-rot of *Nymphaea* spp., control.... 230–231
Leafspot-Rot of Pond Lilies Caused by Helicosporium nymphaearum (paper)..... 219–232

Lily, pond. See *Nymphaea*. Page
Lime—
effect on arsenicals 303
effect on potassium in orthoclase-bearing soils 21–28
Little-leaf—
character of soil in relation to 383–388
comparison with other vine diseases 394
distribution 381–383
effect of—
fertilization 395–397
fungicides 394–395
insecticides 394–395
etiology 392–393
characters 381–382
infectiousness 392
loss by 381
occurrence on *Vitis* spp 381–398
symptoms on *Vitis* spp 389–394
variations in attacks 388–389
variations in susceptibility 393
Little-Leaf of the Vine (paper) 381–398

McClintock, J. A. (paper): Peanut Wilt Caused by Sclerotium Rolfsii 441–448
McCray, A. H. (paper): Spore-Forming Bacteria of the Apiary 399–420
Malus sylvestris—
arsenical injury 287–317
temperature relations of apple-rot fungi on 138–163
Man, treatment of anthrax in 52–53
Manure effect on nitrates and soluble salts of soil 333–359
Measurement of the Inactive, or Unfree, Moisture in the Soil by Means of the Dilatometer Method (paper) 195–217
Mechanism of Tumor Growth in Crowngall (paper) 165–186
Microorganism, influence on fermentation of corn silage 361–380
Milk, ewe's—
fat content 29–33
relation to growth of lambs 32–35
Moisture, soil. See Soil moisture.
Morris, H. E., and Swingle, D. B. (paper): Arsenical Injury through the Bark of Fruit Trees 283–318
Morse, W. J. (paper): Studies upon the Blackleg Disease of the Potato, with Special Reference to the Relationship of the Casual Organisms 79–126
Mucor stolonifer, temperature relations 152

Nelumbium speciosum, host plant of *Helicosporium nymphaearum* 225
Neofabraea malicorticis, temperature relations. 139–164
Nitrogen—
amino, change in fermenting corn silage 368–370, 372, 375
ammonia, change in fermenting corn silage. 369–370, 372
effect on composition of *Citrus aurantium*. 132–134
Nymphaea spp.—
host plants of *Helicosporium nymphaearum* 225
leafspot-rot 219–232

Okra. See *Hibiscus esculentus*. Page
Orange. See *Citrus aurantium*.
Orthoclase—
effect of calcium hydrate on potassium in 24
effect of calcium sulphate on potassium in. 24, 27
soils bearing, availability of potassium in 21–28

Paint, protection of fruit-tree wounds by 295–296
Panax quinquefolia, host plant of *Phytophthora cactorum* 259
Peanut. See *Arachis hypogaea*.
Peanut Wilt Caused by Sclerotium Rolfsii (paper) 441–448
Pear. See *Pyrus* spp.
Pegmatite—
effect of calcium hydrate on potassium in 22–23
effect of calcium sulphate on potassium in 22–23
Penicillium expansum, temperature relations. 139–164
Pestalozzia funerea, temperature relations 139–164
Phyllocactus sp., host plant of *Phytophthora cactorum* 259
Phytophthora—
economic importance of genus 234–235
identification of species of 270–271
studies of the genus 233–276
arecae—
growth 238
morphology of the mycelium 241–242
cactorum—
growth 238
morphology of mycelium 241–242
parasite of *Phyllocactus* sp 259
erythroseptica, morphology of mycelium 241–242
faberi—
growth 238
morphology of mycelium 241–242
fagi—
growth 238
morphology of mycelium 241–242
parasite of *Fagus* sp 265
infestans—
association with blackleg of *Solanum tuberosum* 89
growth 238
morphology of—
mycelium 241–242
sexual bodies 263–265
jatrophae—
growth 238
morphology of mycelium 241–242
nicotianae—
growth 238
morphology of mycelium 241–242
parasitica—
growth 238
morphology of mycelium 241–242
phaseoli—
growth 238
morphology of mycelium 241–242
spp.—
biometrical constants 265–270
morphology of—
chlamydospores 255–258
conidia 243–255
conidiophores 242–243
mycelium 241–242
sexual bodies 258–263
spore forms produced by 239–241

distribution 277-278
hibernation 279
oviposition 280
seasonal history 282
stages of host showing parasitism 279
parasite of—
importance 282
Bruchophagus funebris 277-282
Tetrastichus bruchophagi, a Recently Described Parasite of Bruchophagus funebris (paper) 277-282
Tragopogon pratensis, occurrence of crowngall on 181
Transformation of Pseudoglobulin into Euglobulin (paper) 499-456
Trees, fruit. See fruit trees.
Trichoderma sp., temperature relations 139-164

Page
Trifolium incarnatum, effect of *Sclerotium Rolfsii* on 447
Tuberculosis—
antigens, preparation 5-10
diagnosis by complement fixation 1-20
Tumor—
formation in *Nicotiana tabacum* 177
growth in crowngall 165-186
Urbahns, T. D. (paper): Tetrastichus bruchophagi, a Recently Described Parasite of Bruchophagus funebris 277-282

Vitis spp., little-leaf of 381-398
Volutella fructi, temperature relations 139-164

Water, irrigation, effect on soluble salts of soil 333-359
Washing, effect of, on arsenical injury 302-303
Wheat, effect of calcium sulphate on potassium in 27
Wilt, soybean. See Fusarium-blight of *Soja max*.
Wilting coefficient, temperature relation to soil moisture 203
Wind, dissemination of *Bacterium malvacearum* by 46-469
Wolf, F. A. (paper): A Squash Disease Caused by Choanephora cucurbitarum 319-332
Worandzia subterranea, resistance to *Sclerotium Rolfsii* 445-447

Yellow-leaf. Syn. Little-leaf.
Young, H. D. (paper): Effect of Fertilizers on the Composition and Quality of Oranges. 127-138

Zea mays, silage of—
change in quantity of amino nitrogen in fermentation 368-369, 372, 375
development of acidity in fermenting 368-374, 376-377
disappearance of sugars in fermentation of .. 367-372, 376
formation of alcohol in fermenting 368-374, 376-377
relative influence of plant enzyms on the fermentation of 361-380
Zinc arsenite, injury to fruit trees 299-303
